

Assignment:

You have to create a single-page web app using ReactJS. This will be a news app that will use this API:

<https://newsapi.org/docs/endpoints/top-headlines>

- Use your design skills to make the web app intuitive and pretty. The look and feel should be similar to <https://www.inshorts.com/en/read>. The web app should have the m-web support as well.
- Keep it simplistic. Use the card structure as depicted in the [reference application](#).
- The side navigation menu should contain the following categories: business, entertainment, general, health science, sports, and technology.
- The feed against these categories can be obtained from the same API by passing the category key in query params.
- Each card can be clicked to read the full news article. Open the preview of the news article on the right side of the screen by moving the news list to the left (In m-web, open a popup for showing the full news)

Refer to the API document for more details.
